

Creamos un nuevo proyecto ,una carpeta llamada Robot_Proyecto y en project directory con nombre Robot_Proyecto.

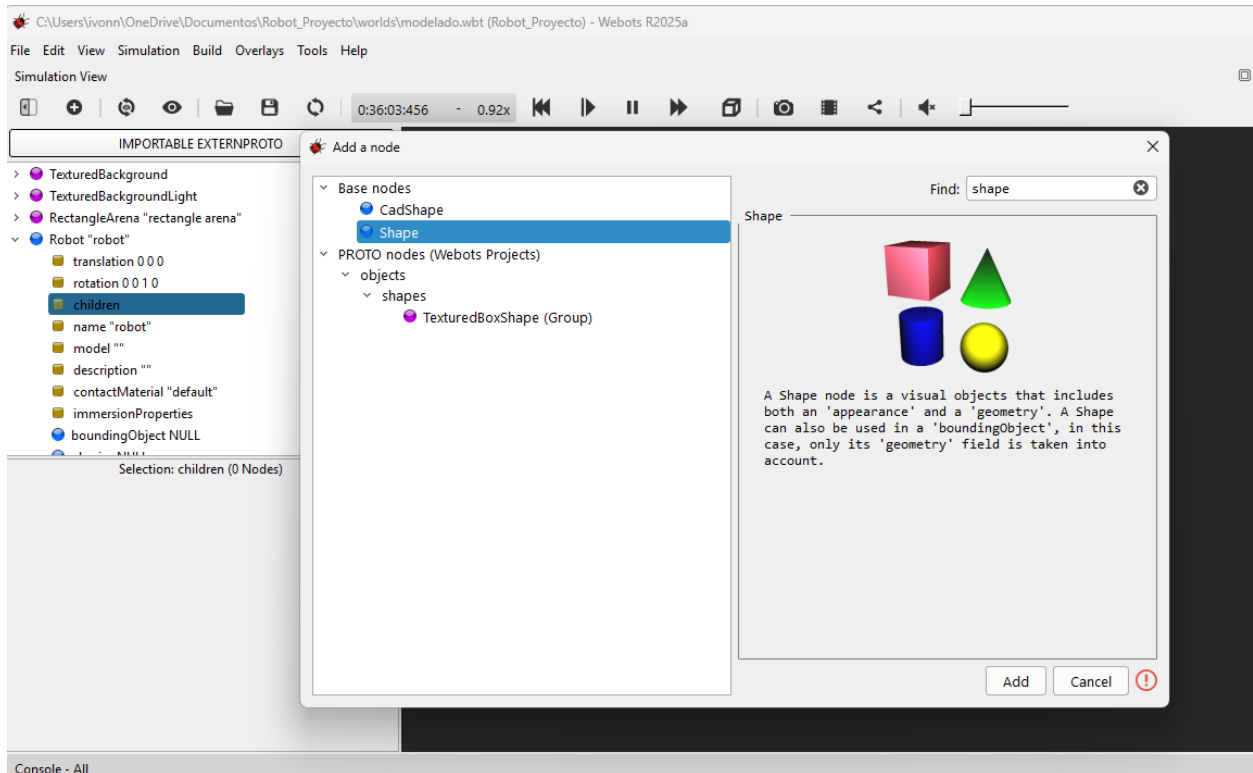

Se puso el piso Seleccionando RectangleArena

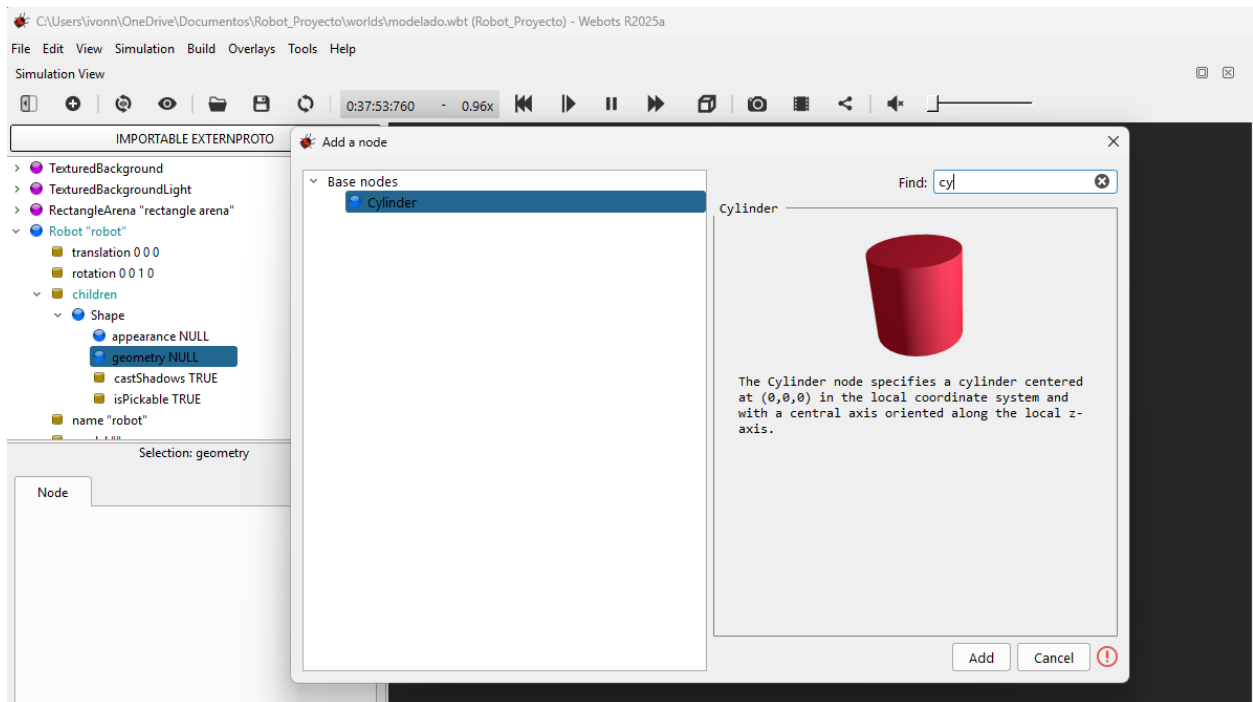

añadimos el robot

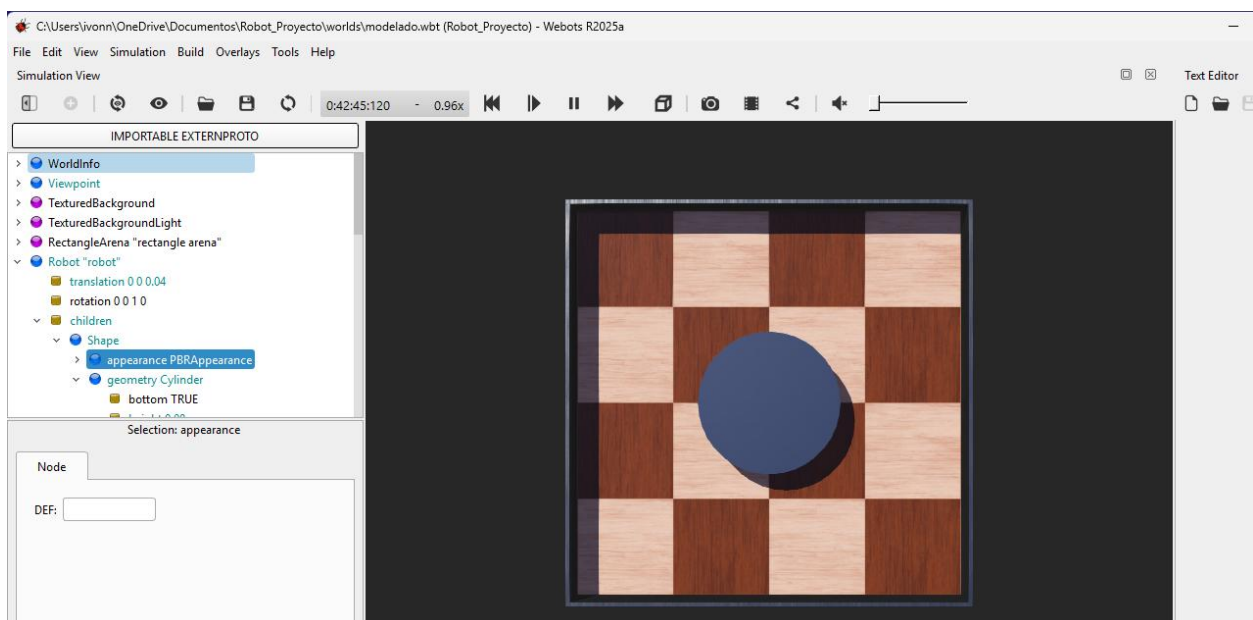

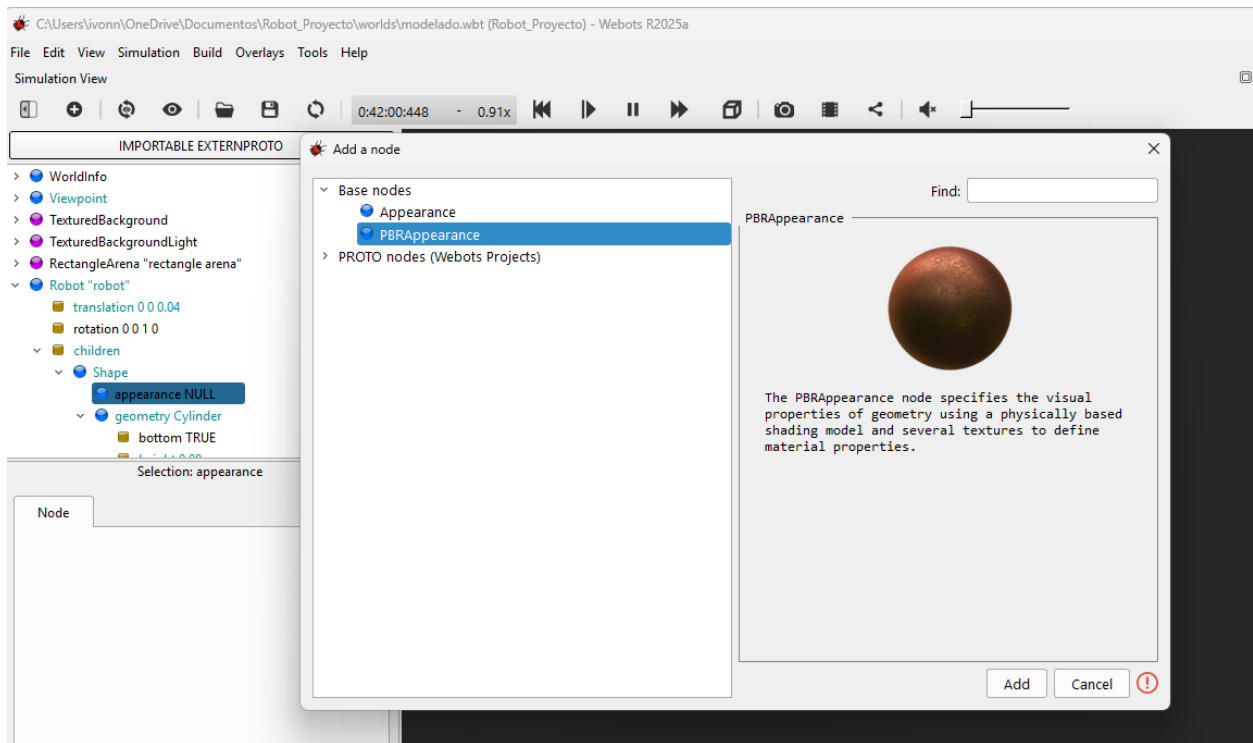

Se agrego el cuerpo

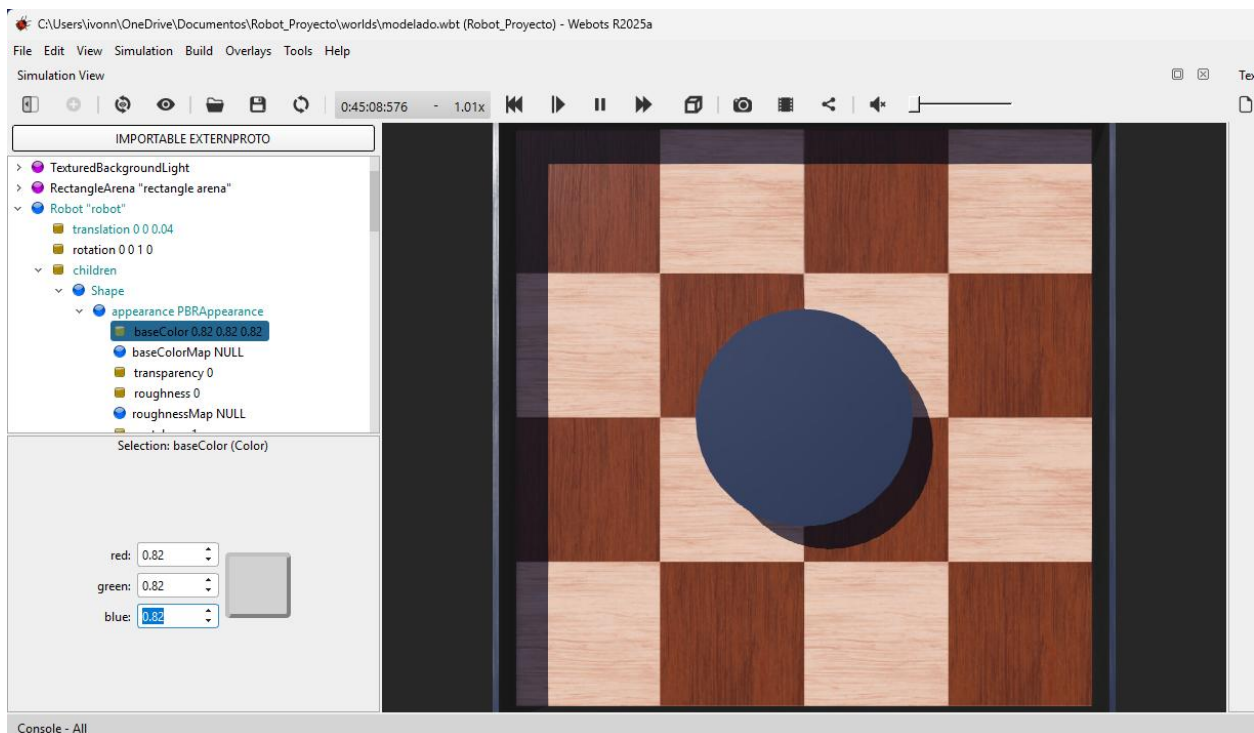

Para darle forma a adimos un cilindro

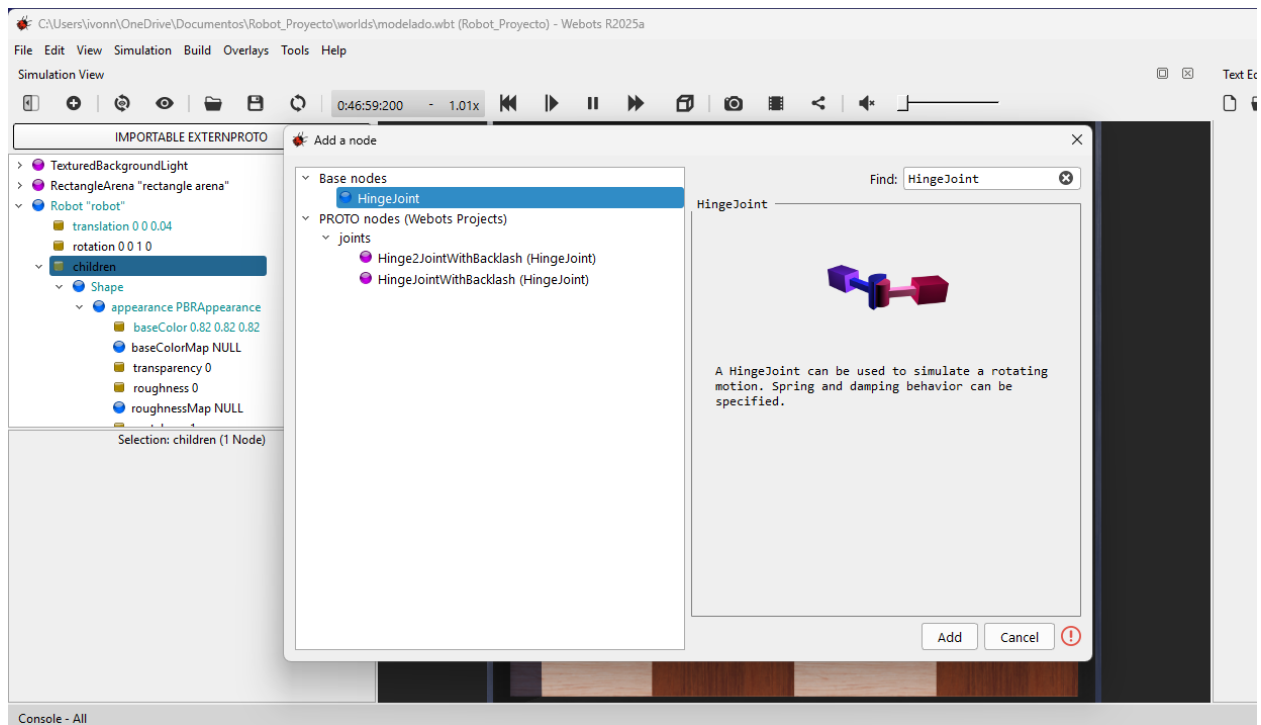

Cambiamos el tamaño y apariencia

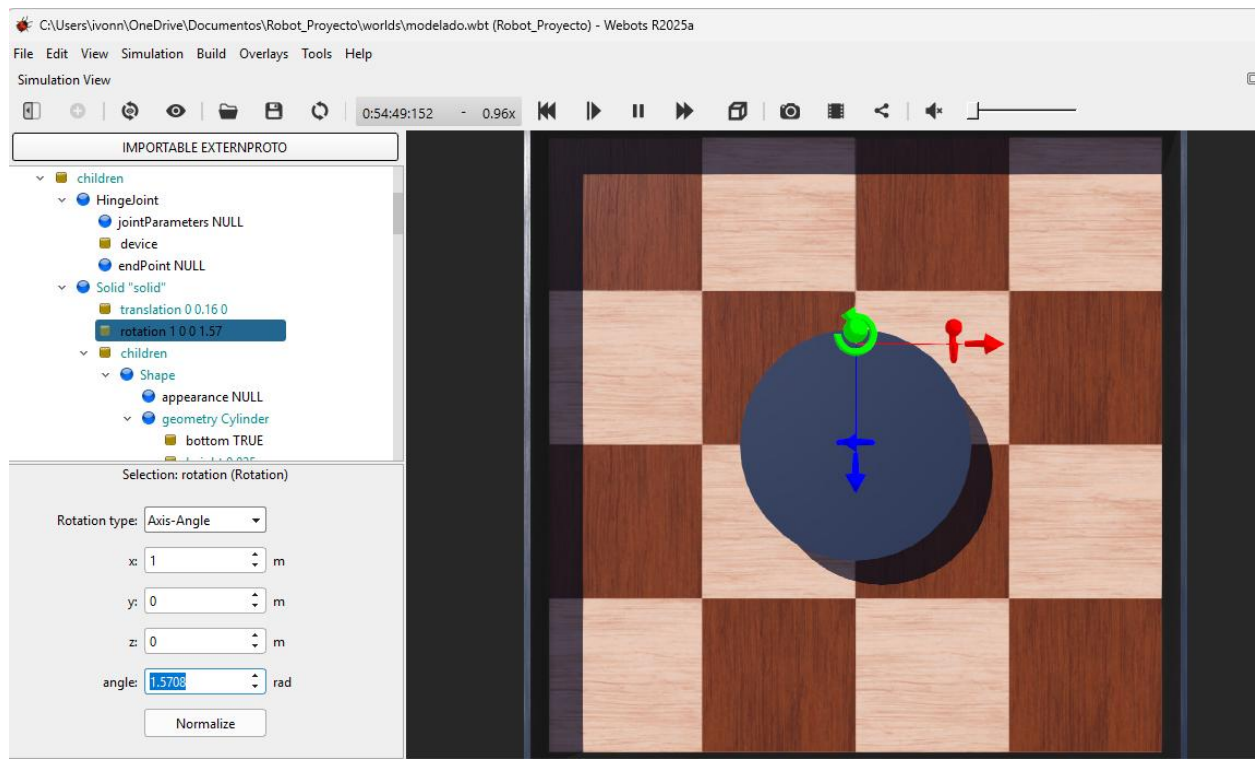

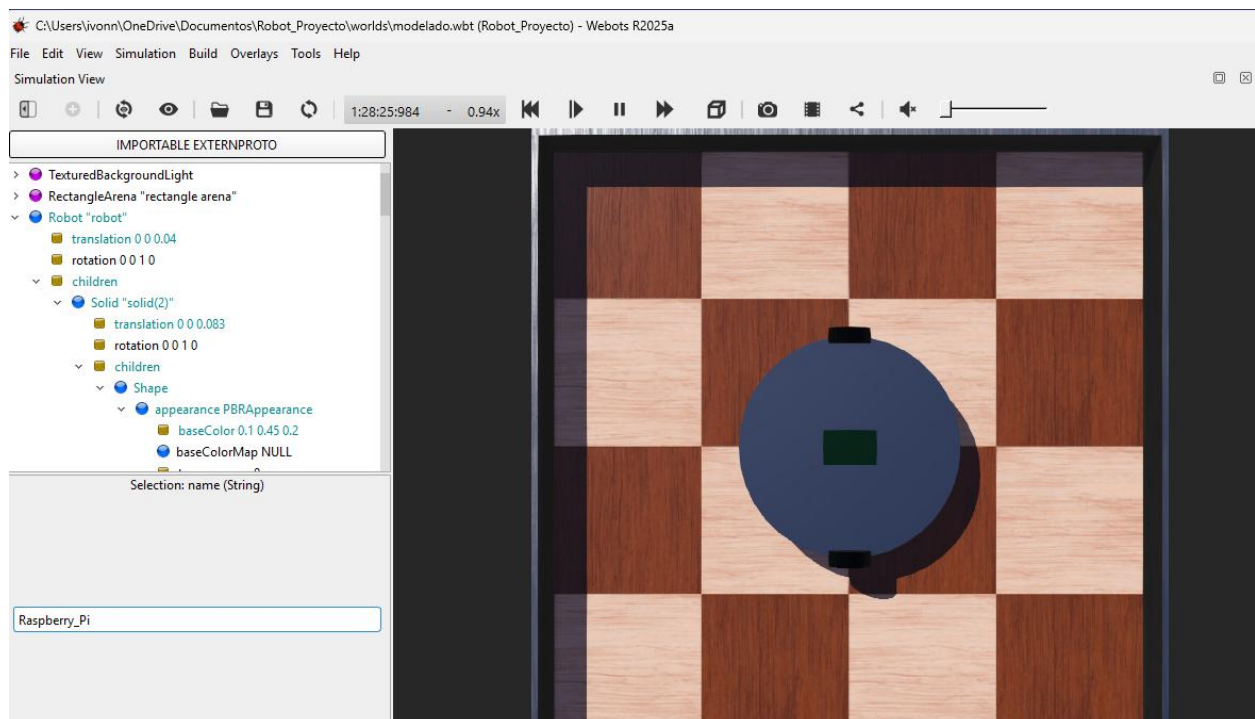

Para las llantas el HingeJoint nos servirá para que la rueda pueda **girar**, en lugar de ser solamente una figura pegada al robot.

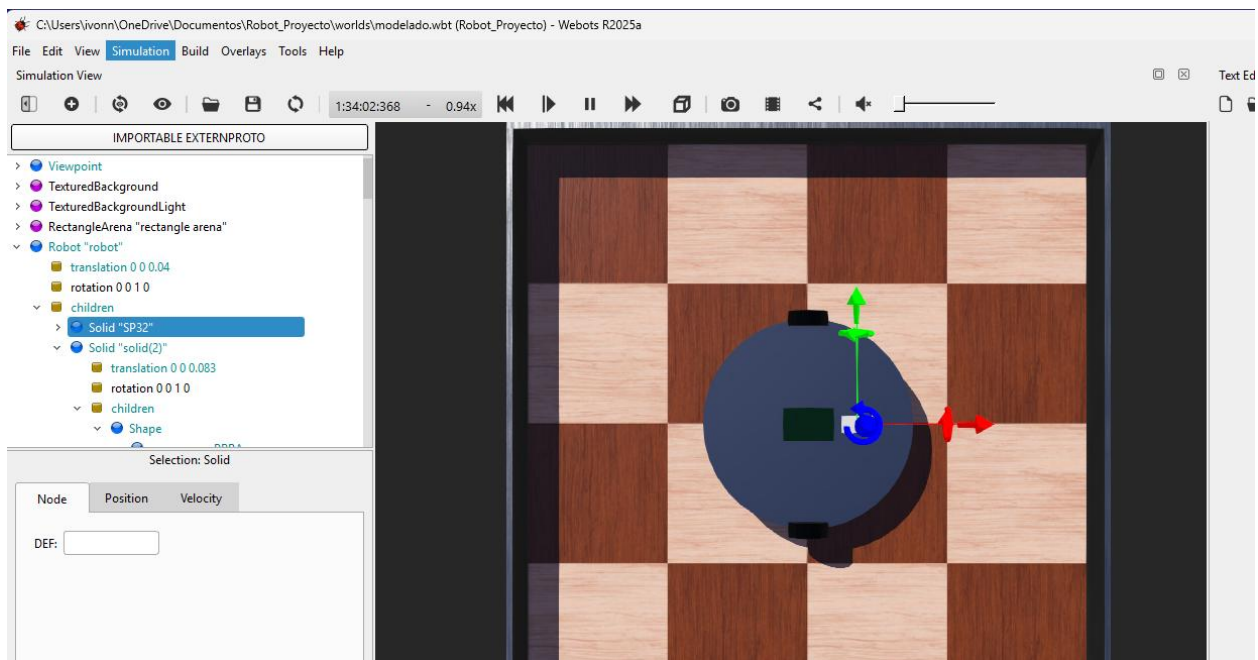

Eso la gira **90°**

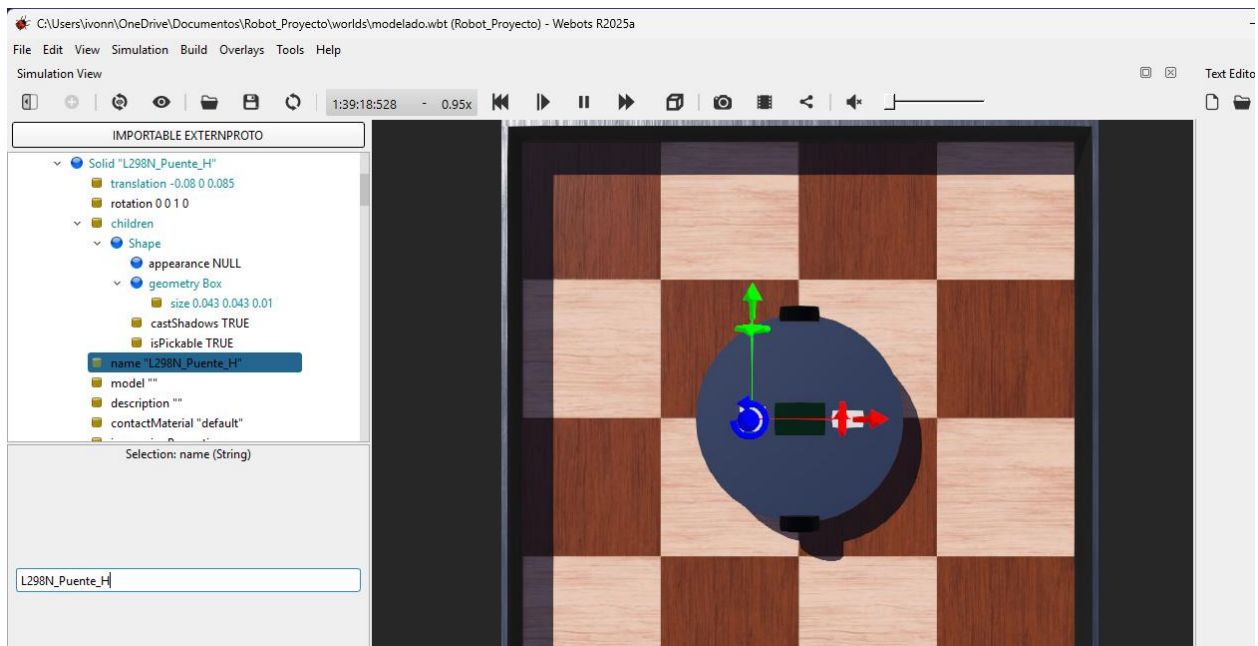

Raspberry pi

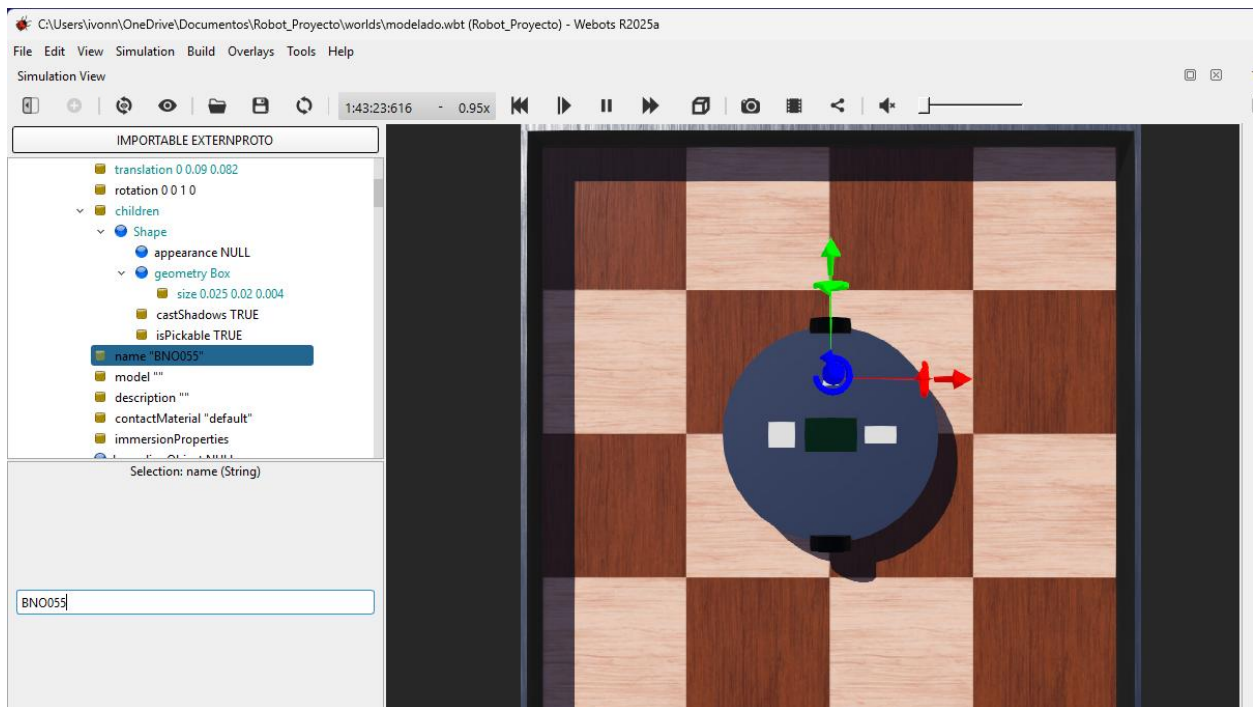

ESP32

Puente h

BNO055

Portapilas
